

PROFILES OF SUCCESS

Central York High School
York, Pennsylvania
Library Periodical Storage

Problem

When the Central York School District was constructing their new high school, the administrators wanted to both conserve and maximize space in the new building. The administrators were especially concerned because the new library only had a limited area for the school's current collection of reference materials, with little space to accommodate future growth. To address their space planning needs, they contacted Datum.

Datum utilizes design programs to create 3D color renderings for customers to see exactly what their unique storage system will look like in their facility, from size and scale to color and aesthetic appeal, before the system is purchased.

Solution

After reviewing the library floor plan and assessing their storage accessibility requirements, Datum assisted the school administration in selecting a MobileTrak5® System with 4Post™ Shelving. The new system allowed the library to store all their materials in less floor space than was originally anticipated. The space savings also created room for additional student workstations in the reference area of the library. Additionally, the administration was able to choose paint and laminate options to match the decor of the new library.

"With the high costs of construction, we looked for every possible way to maximize the use of the space we could afford. By utilizing Datum's MobileTrak5® System for magazines and other reference materials, we expanded the amount of workspace in the librarian's workroom without adding expensive square footage."
