

PROFILES OF SUCCESS

Texas Scottish Rite Hospital for Children
Dallas, Texas
Medical Record Storage

Problem

The Texas Scottish Rite Hospital for Children (TSRHC) has a large quantity of medical files and patient records that the hospital accesses daily. They were in need of a system that would make filing and retrieving file easy, efficient, and fast.

Solution

Datum installed a MobileTrak5e® System with ThinStak® Shelving in the TSRHC to help them address their storage needs.

The MobileTrak5e® System is an electronically controlled MobileTrak5® which has touch sensor controlled carriages that make accessing stored materials effortless. To increase safety, the carriages are equipped with an infrared floor sweep system to ensure that nothing can get caught in the aisles should the carriages be engaged.

The low profile design of ThinStak® increased their storage capacity 14% by allowing them to vertically expand from 7 to 8 levels high.

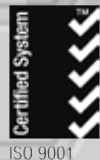

Datum utilizes design programs to create 3D color renderings for customers to see exactly what their unique storage system will look like in their facility, from size and scale to color and aesthetic appeal, before the system is purchased.

"The new system at Texas Scottish Rite Hospital for Children provides us with a user-friendly, up-to-date, consolidated filing environment. The filing system operates smoothly with a touch of the lighted control end panels. Staff members look forward to filing in the new system."
